This includes stand, is made of 304 stainless steel, durable and a handy piece of bee equipment to have on hand. Less expensive than the electric but a little more energy and time involved. We do not provide refunds for live bees. Read our affiliate disclosure. Quick Overview Value for Money Ease of Use Structural Design Durability Good The Honey Keeper 4 Frame Stainless Steel Honey Manual Extractor is a solid product only let down by its structural design. The Honey Keeper 4 Frame Stainless Steel Manual Honey Extractor is made to hold standard sized deep, medium and shallow frames; it can either hold 4 deep frames, or up to 8 medium or shallow ones. These features make it ideal for a casual or hobbyist beekeepers owning a small number of hives. The parts are made in China, and the apparatus is relatively easy to assemble and use. Its dimensions span 45 inches high

by 27.5 inches wide, with the handle included, and the tank is designed to be easily cleaned with warm, soapy water. The stainlesssteel legs included in the set are removable, so that the drum can be placed wherever it is convenient, be it freestanding with its legs bolted to the ground, or set on an elevated surface such as a table or

bench.http://dgsyhg.com/images/xinwen_nr/20190221_105421_195/20200908_190314_160.xml

To allow for easy viewing, the Honey Keeper 4 Frame Stainless Steel Manual Honey Extractor features clear plastic lids, which allow the user to observe and keep an eye on the frames throughout the extraction process. There are also two different types of handles included in the package one is a standard handle to fit over the crank, and the other is a specially designed version containing a spring clutch, which minimizes swinging of the barrel and can be used to crank the gears with much finer control. The sealed bearings and steel gears included in the design also make the spinning process much smoother. Extra or replacement parts can easily be obtained by contacting the manufacturer, and can be installed personally without professional help, making DIY repairs easy and convenient to do. Pros and Cons Pros While not being the most impressive or stateoftheart honey extractor, the most attractive feature of this particular design by Honey Keeper is its low cost, which puts less of a strain on a casual beekeeper's wallet, without compromising its function or performance. For that perk alone, this stainlesssteel honey extractor has garnered the attention of many, and has been compared favourably to other more expensive models in terms of performance. The general concession among users is that it performs above expectations for its price which is on the cheap end of the spectrum. The easily assembled parts can be disassembled just as quickly and effortlessly, allowing the honey extractor to be taken apart for cleaning at regular intervals. Most users of this honey extractor expressed satisfaction and high praise in this aspect. This model is more wellsuited for hobbyist bee keepers as the structure does not seem sturdy enough to withstand heavy use, but it does get the job done much faster with its tangential mode compared to some more costly radial extractors.

Recurring complaints from many users involve small defects in its design, where some of the parts do not fit together as well as was expected. Some reported issues include burrs sticking out the bottom of the legs, and an illfitting crank handle which was functional, but constantly made clicking sounds. The finish also appeared to be poorly done in one case, and several times, the inner basket was reported to collide against a hex nut of the honey gate inside the drum, preventing its spinning movement and rendering the extractor unusable. Another complaint regarding the product are its poor instructions, or general lack thereof. While the honey extractor is relatively easy to assemble going off of common sense, making the instructions unnecessary, it could pose a problem to users inexperienced in setting up this kind of equipment. Operation instructions and tips could also have been useful, as some users have expressed confusion over certain issues, the solutions or advice to which they were unable to find in the manual. To rectify this, they were forced to rely on the internet or advice from other users instead. The result of these defects is that some users are forced to take things into their own hands, either by bringing the extractor out for repair on at their own cost, or make their own modifications to improve the product. Despite that, users still found it cheaper to purchase this model and make improvements, instead of buying a different model or building it themselves. Tips for Use Some tips for use include mounting the extractor securely to a board if not using the legs or to otherwise anchor it firmly using the available holes and fasteners on the legs. This is to help counteract vibrations, as the entire apparatus is reported to wobble when spinning, especially if the load is unbalanced.

<http://www.drupalitalia.org/node/69408>

The spinner only goes in one direction, so the frames should be turned in order to extract all the honey from both sides, as the spinning force only draws the honey towards the outside. For the beekeepers using foundationless frames, I recommend that the spinning process should be done

slowly and gently, turning the frames forwards and backwards several times, in order to prevent all its contents splashing against the inside of the drum. I recommend sticking to only 4 frames at once even when using medium or shallow frames for maximum efficiency, as the inner four sit sideways when fitted in and tend to not be very well extracted. The loads should also be balanced as evenly as possible. Have you ever used the Honey Keeper 4 Frame Honey Extractor. Leave a comment below and let us know what your experience was like. Advanced Gday Sign in to bid or buy eBay Deals Coles on eBay Help Sell Watch List Expand Watch list Loading. Something went wrong. However, they are one of the most important tools when it comes to beekeeping, and are essential for any successful honey business. Many amateur beekeepers also choose to purchase a honey extractor, simply because they make getting honey out of the hives so simple. There are a few things that you should think about when choosing a honey extractor. Electric Or Manual As one of the most

important pieces of beekeeping equipment that you will own, it is important to make the right choice when you are buying your honey extractor. If you have a large volume of honey to process from a lot of beehives, then you might choose to go for an electric honey extractor. However, keep in mind that you will need access to mains power to use this. Alternatively, go for a portable manual extractor that you can take to the hives. This gives you a lot of flexibility and allows you to process your honey on the run. Choose High Quality It is very important to make sure that you choose a high quality model of honey extractor. Don't fall into the trap of purchasing cheap imitation or imported honey extractors. While doing this might save you a few dollars, it could cost you in the long run. Cheap, low quality products are more likely to break, and they won't work as efficiently, especially if you have a large volume of honey to process. Working with More Beehives If you are a keen amateur beekeeper, perhaps you are thinking of expanding and starting a small honey business. If so, then you will need some new beehives and other beekeeping equipment. Make sure that you set yourself up properly, and do things the right way to avoid longterm disappointment.

Laura Valerio 5.0 out of 5 stars Excellent quality, all stainless steel, sturdy construction. It is a beautiful piece of metal working smoothly. Recommended for beekeepers with a small number of hives that want to use high quality equipment. Unfortunately there was no available tracking information First time extraction was great however when using it a second time within a week of first the gearing seized a couple of times and there was some noticeable rust around the main gear.

JeanPierre De Montigny 5.

0 out of 5 stars The company responded very quickly to my inquiry. A replacement was sent promptly. No issues, no argument. I have used it a couple of times and I am very happy with the performance. I screwed it on a heavy wood frame. It has two benefit. It keeps it stable so that I can uncap other frames while the extraction is taking place. No need to hold the tank. If it is not balanced like when extracting one or three frames then I just stand on the wood structure. The second advantage of the wood platform is that it raises it so that the honey valves is high enough for a 5gallon container. Very much worth the price. The plexiglass lid cracked and I had to get a replacement. The valve had a half shredded seal. And the valve was put together backwards. The hole in the bottom was still full of sharp metal bits. It absolutely needs to be filed down before use. The handle keeps unscrewing as you spin the extractor around. I got great support from their service department. I admit I was quite surprised how well and how fast they solved my little problems. Packaging could be better. The extractor works fine. For this price couldn't have asked for better. Would buy again. Easily spins 3 frames at a time. Ideal for hobby or small beekeeping organizations. Excellent customer support. La seule chose c'est à laver, un peu plus de sport, mais se fait quand même bien. Je recommande pour des débutants comme nous!!! Bon rapport qualité prix!!! Rapide pour extraire le miel. Such an excellent seller. Top notch service and solutions on any potential hiccups. Highly recommend! Good quality, works well, the bottom is flat and the honey gate is a little bit elevated off the bottom so you have to finagle the last bit of honey out of it, but for the price I can't complain. Haven't had any issues and have extracted a number of frames with it so far. Should get me by for a year or two until I get above 20 hives. Sorry, we failed to record your vote.

Please try again But a 5 gal bucket will not fit under it but a smaller bucket will. Also please clean it before you use it. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Watch out for the sharp edges on the legs though they'll get you. Sorry, we failed to record your vote. Please try again Works good for a hand one! Sorry, we failed to record your vote. Please try again The hard part is unscrewing the top every time to clean it. Sorry, we failed to record your vote. Please try again. By continuing to browse the site you are agreeing to our use of cookies. I agree You must have JavaScript enabled in your browser to utilize the functionality of this website. Tangential extractors are the most universal honey extractors during the spinning process, the hive frames are tangentially positioned to the vessel thus making the honey divert without any problems. This manual honey extractor has a solid construction and is sturdy on its 3

feet. All parts getting into contact with honey are made of stainless steel and are approved for food. The apparatus consists of an outer drum, an inner basket for the spinning along with comb frame holders and a tap for the drainage. The spinning basket allows room for 4 frames. There can be set not only frames for Zander dimension but also frames for DIN standards. A traverse is connecting the hand crank with the spin basket. Due to the smoothrunning hand crank drive the inner basket is set in motion. Because of a centrifugal force, the honey is being injected from the combs on the wall of the basket and thereafter is running to the ground. With the help of the drain tap, the honey can now be collected in a suitable vessel. The cover of the device is made of transparent plastic and has 2 removable parts. An inspection of the spinning process is possible at any time. Of course all parts of this honey extractor can be easily cleaned.

This tangential manual honey extractor is designed to hold up to 4 frames and is simple to use. The extractor is made from high food grade stainless steel and is a very durable extractor for the hobbyist or small apiarist bee keeper. The 2 clear acrylic lids allow easy inspection of the extraction process as you are harvesting the honey. The extractor has a two option height adjustment, depending where you fix the screws on the legs when assembling. It can either be 30cm or 40cm vertical distance from the lowest point of honey gate to there ground.
